PRÓLOGO.

TANTAS son las palabras científicas, de ingeniería y otros términos técnicos que han venido á usarse desde que la importante obra de Ponce de León fué presentada al mundo anglo-español como Diccionario Tecnológico prácticamente completo — y en verdad así fué — que ha sido necesario suplementar esa obra con una compilación de tantos de dichos términos como hasta ahora han sido aceptados en el dominio de la tecnología española é inglesa.

Este es un punto que se ha tenido constantemente presente al preparar esta obra, la cual no hay pues que considerarla como una colección de voces omitidas del diccionario al cual es primariamente un suplemento: considerarla así sería censurar inmerecidamente á un habílsimo autor y su inestimable obra; el objeto ha sido más bien producir una nomenclatura nueva, suplementaria no sólo á la gran obra de Ponce de León, sino á otros diccionarios tecnológicos en las lenguas española é inglesa.

Que en su turno este suplemento tendrá pronto que suplementarse será evidente á todos los que observen la actividad inventiva siempre creciente de los tiempos actuales.

Esta es una dificultad que no se puede vencer, y que, sin duda, siempre prevalecerá mientras que se concibiesen ideas nuevas y se inventasen palabras para representarlas. Nadie comprenderá esto más fácilmente que aquellos para quienes, principalmente, esta obra se ha designado, y á quienes se confía será de valor.

Entre las principales obras que he consultado debo mencionar el "Dictionary of Mining and Metallurgical Terms" por el Señor Halse; Términos Marítimos por el Señor Hewlett; Nomenclatura Comercial por la Oficina de las Repúblicas Americanas, Washington; y el Diccionario de la Lengua Castellana, Madrid.
